

Project: **Corona Virus Patient Management System**

Project Description:

Design and develop a program to automate a **Corona Virus Patient Management System** in C++ . The detail of the program is as below:

- Your program should have a proper login.
- Functionality to Add, Delete, Search and Modify records of the patient.
- A detail file (txt or binary) that includes the record of the patient along with all the attributes, some of them are symptoms, immune level, severity, city name etc.
- A person must be declared Corona Virus Patient if the immune level is below the minimum level and symptoms are fever, dry cough, tiredness etc.
